Okay. You're probably wondering how do I know who to accept in my group or not accept in my group?

First of all, I look at things like how long have they been on Facebook? It'll tell you, joined Facebook on whichever day. If it's the last few days, I know they're a spammer likely, and I don't want them to be in my group. Or if it's the last few days and they happen to be in a hundred groups all of a sudden, that's a red flag right there.

I look at, am I friends with this person on Facebook? If so, yes, approve them. If I'm not, then I look at the day that they joined Facebook. I then look at who are our mutual friends? What groups do we have in common? Then I also look at the other groups. For instance, how many people I know, Facebook groups that we're a part of, and anything else that I need to know by looking at the other groups that they're part of.

Now this particular person didn't answer my questions, so I'm going to leave it for a little while to see if they will answer the questions. Now Facebook says that they'll remind someone in a couple of hours. I'll usually leave it for that time so that person can then be notified by Facebook because it'll say something along the lines of, "Tell the admins of this particular group that ... Answer their questions so they can help add you to the group." Something along those lines. Then we've got another person down here who has answered my questions, so that's good. Then I look at, okay, well he joined Facebook in 2007. Awesome. We've got mutual friends. This looks great. All right. I will definitely add this person. The other person I might wait.

One of the things that I also do is I'll scroll up from the bottom up and copy and then I paste this into my spreadsheet. In my spreadsheet, it'll then have all this info, which is extra. But then I just search for, what is your biggest struggle or question? Then I just look for all the struggles so that I can get the responses for people.

All right. I hope that helps, and that's it for today.
